Immunogenic or antigenic compositions comprising the proteins are useful as vaccines and also in diagnostic assays. The sequences are useful for the detection or diagnostic assays. The sequences are useful for the detection or diagnosis of S. pneumoniae infection, by contacting a sample to be tested with them. Agents capable of antagonising, inhibiting or interfering with the function or expression of the protein or polypeptide are useful in medical compositions in the treatment or prophylaxis of S. pneumoniae infection, they can be used to treat bacterial pneumonia, which has high rates in young children, the elderly, and in patients with predisposing conditions such as asplenia, heart, lung and kidney disease, diabetes, alcoholism, or with immunosuppressive disorders, especially AIDS. They can also be used to treat pneumococcal septicaemia, otitis media, sinusitis, and

identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56454. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein, DNA or antibody (in a composition), aki comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides 8-100 of a sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New proteins and nucleic acid molecules from Streptococcus useful as medicaments for treating or preventing a disease due to streptococcus bacteria, such as pneumonia, sepsis, o or ear infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S. pneumoniae

cc sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers chaving substantial complementarity define the termini of the target computed substantial complementarity define the termini of the target compound complementarity define the termini of the target compound some compound substantial complementarity define the termini of the target compound brinds to the protein and a Streptococcus pneumoniae bacterium, where one or more compound substantially contained as the proteins has been rendered inactive. The proteins, contained the proteins has been rendered inactive. The proteins, contained for treating or preventing a disease or infection due to conclude the proteins are useful as pneumonia, concluded the proteins of the proteins are useful in developing contains, otitis media or ear infection. They are also useful for conclude the printing immunodominant proteins. The methods are useful for the 2489 identified coding region from the genomic sequence.

CC Note: The sequence data for this patent did not form part confidence in the printed specification, but was obtained in electronic confidence in the proteins of the printing from WIPO at the confidence in the proteins of the printing from WIPO at the printing from WIPO at the proteins of the protein was obtained in electronic confidence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                      The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes nucleic acids (1) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae BVH-3 protein antigen.

XX New Streptococcus pneumoniae BWH-3 and BWH-11 variant and epitope-bearing streptococcus infections such as otitis media.

PT meningitis, and bacteraemia -

XX Example 3; Fig 2; 113pp; English.

XX The invention describes an isolated polypeptide (I) with 70-90% cidentity to Streptococcus pneumonia protein BWH-3, BWH-11, variants of the invention describes an isolated polypeptide (I) with 70-90% cidentity to Streptococcus pneumonia protein BWH-3, BWH-11, variants of BWH-3 or BWH-11, or chimeric sequences derived from them. A vaccine (II) comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcus buch streptococcus such as Streptococcus pneumoniae, group A streptococcus such as Streptococcus pneumoniae, S. dysgalactiae, group B Streptococcus such as Streptococcus pneumoniae, S. dysgalactiae, group B Streptococcus such as Streptococcus pneumoniae infection. (III) is useful in DMA immunisation content for the preumoniae and streptococcus in a biological sample for S. pneumoniae infection. (III) is useful in a biological sample for containing the bacteria. The DMA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for C diagnosing streptococcus pneumoniae protein BWH-3, used to create the antigenic peptides described in the method of the invention.

Claim 1; Page 1157-1161; 1409pp; English.

The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391 (AAV52524) are genomic fragments from streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae SP63 BVH-3 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 6; Fig 18; 106pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcal otitis media,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
The invention describes an isolated polypeptide (I) with 70-90% (I dentity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of CC BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) CC comprising (I) is useful for therapeutic or prophic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection CC in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcual bacterial CC infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus propens, group B Streptococcus Streptococcus aureus) in an individual susceptible to the infection. CC A polynucleotide (III) encoding (I) is useful in DNA immunisation CC techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA CC probes for use in detecting the presence of Streptococcus in a biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BVH-3; BVH-11; vaccine; meningitis; otitis media; bacteraemia; pneumonia; streptococcal bacterial infection; gene; ss.

The DNA probes may also used for detecting circulating S. pneumonia nucleic acid in a sample diagnosing streptococcal infections. This sequence encodes the Streptococcus pneumoniae protein BVH-3, used to create the antigenic peptides described in the method of the invention.

This sequence may be part of a larger open reading frame (see AAA0857) which encodes an approximately 92 kDa protein also having human C3-degrading activity. The DNA sequences can be used for producing an immune response to Streptococcus pneumoniae in a mammal. Antibodies against the proteins can be used to inhibit S. pneumoniae-mediated C3 degradation. C3-mediated inflammation and rejection in xenotransplantation can be inhibited by expressing the nucleic acid sequences on the surface of an organ of an animal. In particular, the polypeptides are useful for stimulating the immune system and are effective to immunize or treat a mammalian subject against Streptococcus pneumoniae infection or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (MINU )

                                                                                                                                                                                                                                                                                                                                                                                          mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds t (I). A composition comprising (I) or a nucleic acid encoding (I), may used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity cohromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus posens), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71556 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               for

       The sequence encodes Streptococcus pyogenes Group A Streptococci protein 36, GAS36. A recombinant cell producing GAS36, GAS36(2) or GBS36 is useful as a vaccine for vaccinating an animal, preferably a human against infection by a bacterial organism such as a streptococcal or staphylococcal bacteria, and for treating a disease caused by group A streptococci, group B streptococci or Staphylococcus aureus in an animal preferably a human. Vaccines and antibodies against the proteins of the invention are useful in prophylaxis and/or treatment of diseases such as necrotising fascilitis, scarlet fever, sepsis, impetigo, bacterial meningitis, otitis media, community-acquired pneumonia and many diseases
meningitis, of newborns.
                                                                                                                                                                                     New polypeptides obtained from group A or B streptococci , especi
Staphylococcus aureus homologous to Sp36 protein of Streptococcus
pneumoniae useful as antibacterial vaccines -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          comprising GBS polynucleotides or polypeptides can be used as vaccines and for the treatment or prophylaxis of GBS infection. The polynucleotides and polypeptides can also be used in the detection of and for screening DNA encoding bacterial cell envelope associated or screening DNA encoding bacterial cell envelope associated or secreted antigens in gram positive bacteria. AAA05873 to AAA05941 represent primers used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAA05803 to AAA05872 encode proteins, polypeptides and peptides (gi
in AAY91275 to AAY91343) isolated from Group B Streptococcus (GBS),
known as Streptococcus agalactiae. The GBS polynucleotides and
polypeptides have antibacterial activity. Immunogenic compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New Group B Streptococcus protein, useful as vaccine, for diagnosis of Streptococcal infections and for screening of antibodies or affibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           27-JUL-1998;

the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Streptococcus; GAS
group A streptococ
antiinflammatory;
                                                                                                                                                                                                The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the tracters of the control of the

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             뭉
        AAA05803 to AAA05872 encode proteins, polypeptides and peptides (given in AAY91275 to AAY91343) isolated from Group B Streptococcus (GBS), als Known as Streptococcus agalactiae. The GBS polynucleotides and polypeptides have antibacterial activity. Immunogenic compositions comprising GBS polynucleotides or polypeptides can be used as vaccines and for the treatment or prophylaxis of GBS infection. The polynucleotides and polypeptides can also be used in the detection of G and for screening DNA encoding bacterial cell envelope associated or screened antigens in gram positive bacteria. AAA05873 to AAA05941 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Group B Streptococcus; Streptococcus agalactiae; protein antigen; vaccine; screening; immunogen; detection; diagnosis; infection;

A recombinant cell producing GAS36, GAS36(2) or GBS36 is useful as a vaccine for vaccinating an animal, preferably a human against infection by a bacterial organism such as a streptococcal or staphylococcal bacteria, and for treating a disease caused by group A streptococci, group B streptococci or Staphylococcus aureus in an animal preferably a human. Vaccines and antibodies against the proteins of the invention are useful in prophylaxis and/or treatment of diseases such as mecrotising fasciitis, scarlet fever, sepsis, impetigo, bacterial meningifis, otitis media, community-acquired pneumonia and many diseases of newborns. The proteins are also used as immunogens to stimulate the production of antibodies for use in passive immunotherapy, for use as diagnostic reagents and for use as reagents in other processes such as

     the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. aggalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds (I). A composition comprising (I) or a nucleic acid encoding (I), may used as a vaccine or diagnostic composition. The disease caused by
                                                                                                                                                               The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus progenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for

Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying Streptococcus proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2155561 BP;

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the S. pneumoniae GBS BVH-71 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2469 BP; 842 A; 481 C; 519 G; 627 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The GBS antigens can be recombinantly expressed using standard recombinant methodology. The GBS antigens of the invention can be used as vaccine components for the treatment or prophylaxis of diseases and symptoms mediated by Streptococcus infection, especially group A Streptococcus (S. pyogenes), GBS or S. agalactiae, S. dysgalactiae, S. uberis, S. nocardia, as well as Staphylococcus aureus. The vaccines are administered to those individuals at risk of GBS infection, particularly pregnant women and infants for sepsis, meningitis, and pneumonia, as well as immunocompromised individuals, such as those with diabetes, liver disease or cancer. The vaccines also have vetinary applications, such as for the treatment of mastitis in cattle. The present sequence represents a DNA encoding 8 GBS antigens of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 5215 BP; 1631 A; 957 C; 1038 G; 1589 T; 0 other;
